## ASTRONOMICAL AND LABORATORY OBSERVATIONS AT KITT PEAK USING PHOENIX

JEFFERY D. WALLER, Department of Chemistry, University of Waterloo, Waterloo, Ontario, Canada N2L 3G1; KENNETH H. HINKLE, National Optical Astronomy Observatories, PO Box 26732, Tucson, AZ 85732, USA; and PETER F. BERNATH, Department of Chemistry, University of Waterloo, Waterloo, Ontario, Canada N2L 3G1.

A new high resolution ( $\sim 0.02~{\rm cm^{-1}}$ ) cryogenic echelle spectrograph called Phoenix has been constructed at Kitt Peak National Observatory. Phoenix has been used to record high resolution infrared spectra of the obscured carbon star IRC+10216 and the comet Hale–Bopp. Observations were made while Phoenix was attached at the Cassegrain focus of the 2.1 m telescope at Kitt Peak. Molecules targeted for observation included  $C_7$ ,  $C_9$ ,  $C_2H_6$ ,  $C_2H_4$ ,  $C_4H_2$  and  $C_3$ . The design parameters and performance characteristics of Phoenix will be discussed along with some laboratory measurements.
