

EVOLUTION OF RELATIVISTIC DENSITY FUNCTIONAL METHODOLOGIES

BRUCE E. BURSTEN, JUN LI, CLINTON S. NASH, AND JEAN-PHILIPPE BLAUDEAU, *Department of Chemistry, Ohio State University, Columbus, OH 43210.*

A retrospective and current view of the use of relativistic electronic structure calculations to address the structure and bonding in molecular systems of the actinide and transactinide elements will be presented. The focus of the discussion will include the evolution of density functional methodologies, from early quasirelativistic X_α methods to current fully relativistic density functional methods.
