

FOURIER TRANSFORM INFRARED EMISSION SPECTRA OF CaH AND SrH

A. SHAYESTEH, I. GORDON, D. R. T. APPADOO, K. A. WALKER, and P. F. BERNATH, *Department of Chemistry, University of Waterloo, Waterloo, ON, N2L 3G1, Canada.*

The vibration-rotation spectra of gaseous CaH and SrH have been recorded in emission using a furnace-discharge source. Ca and Sr vapor were produced at 780°C and 850°C, respectively, and reacted with a few torr of hydrogen gas under a 3 kV / 333 mA discharge to produce the metal hydrides. The fundamental and first three hot bands, $\nu=1-0$ to $\nu=4-3$, in the $^2\Sigma^+$ ground electronic state of each molecule were observed. The analysis of the data is in progress and will be presented.
