

STRUCTURE OF NAPHTHALENE DIMER INFERRED FROM SPECTRA OF NAPHTHALENE DIMER - ARGON
VAN DER WAALS COMPLEXES

Chemistry, University of Sydney, NSW 2006, Australia.*

We have obtained resonant 2-colour 2-photon ionization spectra of Np_nAr_m (Np = naphthalene). While most spectra are broad and unresolved, those of Np_2Ar_m arouse particular attention as they appear to consist of two independent and shifted electronic spectra. We consider our experimental data in the light of proposed structures for the naphthalene dimer and offer an alternative explanation for the observed broadening of the spectrum of Np_2 in terms of fragmentation of higher clusters.
