

THE HOT SUMMER OF HITRAN2008

I. E. GORDON, L. S. ROTHMAN, *Harvard-Smithsonian Center for Astrophysics, Atomic and Molecular Physics Division, Cambridge MA 02138-1516, USA.*

The HITRAN2008^a database is expected to be officially released at the end of this summer. The "β-version" of the new compilation will be assembled before the HITRAN meeting which immediately follows Ohio symposium. At the HITRAN meeting, the results of the quality assessments of the "β-version", as well as suggested "last-minute" additions, will be discussed.

The new data will be comprised of the line lists that are already available on the web site (<http://www.cfa.harvard.edu/hitran/updates.html>) and some of the forthcoming updates. The line-by-line lists for almost all of the 39 HITRAN molecules will be updated in comparison with the previous compilation (HITRAN2004^b). The caliber of the updates ranges from corrections to the representations of quantum assignments to complete replacements of the lists. In addition, 2 new molecules, BrO and CH₃Br, will be included. Some of the most important updates, such as for water vapor, CO₂, O₃, the oxygen A-band, etc, will be presented.

^aThe HITRAN database is supported by the NASA Earth Observing System (EOS) under the grant NAG5-13524.
